### MESSAGE

Examiner Rashid,

At your request, Applicant's representative submits the following list of topics that Applicant's representative would like to discuss during the interview scheduled for June 17, 2008, at 2:00 pm EST.

#### I. § 103(a) Rejections of Claims 1-20 over Takane and Gleason

In the non-final Office Action mailed January 17, 2008, claims 1, 2, 4, 5, 11, 12, 14, 15, 17, and 19 were rejected under § 103(a) as unpatentable over U.S. Patent No. 6,538,249 to Takane et al. ("Takane") and U.S. Patent No. 6,456,899 to Gleason ("Gleason"). Applicant respectfully disagrees with the grounds for this rejection.

Applicant's representative would like to discuss the various elements in independent claims 1, 7, 11, and 18-20, and review the teachings of *Takane* that have been cited in the Office Action. Further, Applicant's representative intends to identify elements recited in independent claims 1, 7, 11, and 18-20 that are not taught or suggested by *Takane* or *Gleason*.

If there is a problem with this transmission, notify the sender at the number above.

For example, Applicant's representative would like to discuss the limitation recited in claim 1 of "scan[ning] the image, using the predetermined edge reference data, to detect edge points of the image" (emphasis added). It appears that the Office Action relies on a single step of computing an intensity gradient (i.e., as performed by the Sobel filter) as allegedly constituting both "scanning the image" and generating the "edge reference data." However, Applicant reasons that "scanning the image, using the predetermined edge reference data" cannot include generating the edge reference data for at least the reason that the edge reference data must necessarily be "predetermined" simply in order to "scan the image," as recited in claim 1.

Please let me know if you would like any clarification regarding the interview topics discussed above.
